MARIAM ALAHMED

Computer Science Student | Software Development, AI & Data Science

Eastern Province, Saudi Arabia | iamaryamalahmed@outlook.com | linkedin.com/in/mariam-alahmed-cs

PROFESSIONAL SUMMARY

Computer Science student at King Faisal University with hands-on experience across software development, artificial intelligence, data science, and cybersecurity, built through academic projects, hackathons, and cooperative training. Selected among the top 12 candidates in the Tourism Hackathons series for an AI-driven smart tourism platform. Currently completing a Co-op training program at Saudi Net Link, with practical exposure to NOC operations, satellite communications, network monitoring, and SOC/Wazuh security monitoring. Comfortable with Python, machine learning, and data analysis.

WORK EXPERIENCE

Computer Science Co-op Trainee Jun 2026 – Present

Saudi Net Link (SNL), Saudi Arabia

- Gained hands-on exposure to Network Operations Center (NOC) activities, network monitoring, troubleshooting, and technical support within a telecommunications and satellite communications environment.
- Monitored satellite network performance and modem traffic using iMonitor, and supported configuration and troubleshooting through iBuilder.
- Worked with network management platforms including Odoo, Aruba, and TP-Link Omada for ticketing, site access, and device configuration/troubleshooting.
- Gained practical exposure to satellite communication infrastructure, including VSAT antennas, modems, BUCs, LNBs, and teleport/data-center environments.
- Completed hands-on training in Wazuh security monitoring as part of SOC training, including dashboard development and analysis of authentication events and alerts.

EDUCATION

Bachelor of Science in Computer Science Expected Graduation: 2027

King Faisal University — College of Computer Sciences & IT

PROJECTS

Tasha – Smart Tourism Platform Sep 2026

- Selected among the top 12 candidates in the Tourism Hackathons series; building AI-driven demand and crowding prediction and recommendation features for a smart tourism platform.

Smart Parking System Feb 2026 – May 2026

- Built an AI-based system for real-time parking occupancy detection using computer vision techniques.

SMS Spam Detection – Comparative ML Model Analysis Apr 2026 – May 2026

- Compared multiple machine learning models for spam classification, evaluating performance across accuracy and other metrics.

AI-Powered Text Summarization Web Application May 2025

- Developed a web application combining NLP techniques and web development to generate automatic text summaries.

TECHNICAL SKILLS

- **Programming:** Python, Java, C/C++
- **AI & Data Science:** Machine Learning, NLP, Data Analysis, Scikit-learn, Pandas
- **Cybersecurity & Networking:** Wazuh, SIEM Concepts, Network Monitoring, Satellite Communications (VSAT)
- **Tools:** Git/GitHub, Figma, Odoo, Aruba, TP-Link Omada, iMonitor, iBuilder

CERTIFICATIONS & TRAINING

- GVF500: Introduction to Satellite Communications (Edition 2) — Course Completion, Global VSAT Forum (GVF), 2026
- UX/UI Learning Path (UX Research & Planning, UI Prototyping, Applied UX/UI Project) — Satr Platform, Jul 2026
- PyTorch Basics for Machine Learning — edX
